Chair in Data Science and
Government

School of Government
School of Computer Science
University of Birmingham

I am a pioneering researcher at the intersection of artificial intelligence and political science. My work develops advanced computational methods to address complex questions in politics, focusing on decision-making, policy formulation, and public engagement. As Turing Academic Lead and Founding Director of the Centre for AI in Government, I lead innovative projects integrating AI-driven simulations and political text analysis. My research demonstrates the broad impact of computational approaches in advancing our understanding of political processes and governance.
